balance your gaming
floats

PANDORA

Cash Management Systems to compliment the Departments EMS system

Pandora will provide venues with a cash management tool to manage floats on a daily basis and complete hopper reconciliations on a daily and/or weekly basis.

Pandora downloads the machine meter readings straight from the site controller using the departments designed EMA file.

Pandora contains a simplistic way to complete a GMA

Pandora data forms are compliant DIA forms (e.g. Cash Clearance Details report, Daily Jackpot Cancelled Credit Report, Cancelled Credit and Refill Report, Unpaid Prize Report, Gambling Equipment and Player Fault Report and a Key Register), they are linked back to the Pandora's Cash Management programme machine names, serial numbers, opening readings etc and preloaded.

FROM only \$1.50 per day Plus GST

Support options available from \$1.50 per venue per day plus GST

Customer Comments

Pandora – Salamander Solutions

"We are staggered at how quickly Karen and the team at Salamander brought Pandora to market given the time squeeze created by the condensed roll out of EMS" comments Pelorus Trust Manager Alister Skene. From when the EMS software language was released to the market to when our first site went 'live' was just a few short weeks. "The fact that Salamander had a product the quality of Pandora available for us speaks volumes about their skill and commitment to their clients".

"Obviously we were looking for a programme that would compliment the EMS system and provide us with a software tool to enable us to go that bit further for our venue operators. Whilst EMS give us the basics and the ability to calculate the weekly banking figure we wanted the provision for venue operators to balance their cash and track their float just as the KIS gaming software did. The beauty with Pandora is that it takes the information from the site controller – the same information that is sent to the EMS HQ in Wellington and is used on the website – and this info populates the fields within Pandora so it is virtually an automated process". Alister also notes that Pandora acts as useful back up and a mechanism for obtaining information from the site controller in the event of a telecommunications failure or problems with Intralot's website.

Karen has a great understanding of the legislation and what is required from a compliance point of view. She uses this as the starting point and works from there. It is also great how she appreciates that not all pub managers are computer geniuses so she adopts the same "keep it simple" philosophy as in previous Salamander products.

"My publicans have really got the hang of Pandora and EMS now and I doubt any would be willing to trade for another product or go back to manual systems. From my point of view Pandora is the market leader and with the possibility of more innovations to follow looks set to stay that way".
